

PRODUCT UPDATE

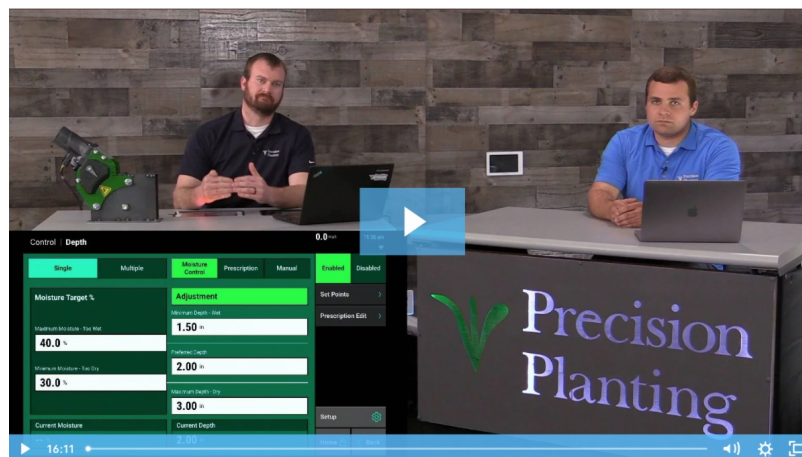

Getting the Most Out of SmartDepth

Whether you're a few weeks into planting or still a couple weeks away, take a few minutes to watch these new SmartDepth videos to learn how to get the most out of SmartDepth this planting season. These videos, presented by Ryan Johnson from Product Support along with research agronomist Aaron Herrmann, include instructions on how to set the offset when your actual seeding depth does not match your commanded depth, what each control mode is and when to use it, and a reminder of why depth matters agronomically. These can also be useful as you talk with growers during the season who identify issues with planting depth and moisture.

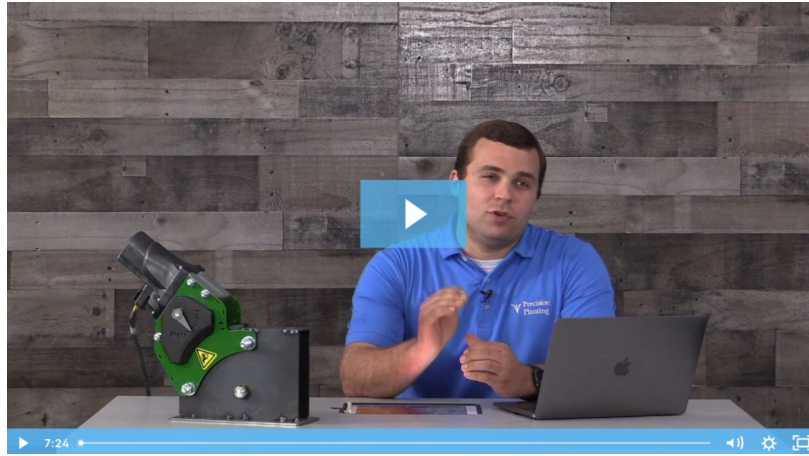

Seed Depth Offset Calibration: Commanded vs. Actual

Setting SmartDepth for Success: What does each control type do and when should I use each?

Planting Depth Refresher: The Agronomy Behind SmartDepth
