

730585 – Blower Dust Exhaust

Remove the 2 screws of the left side of the blower plate, and install the flange plate re-using the 2 screws.

Install the tube (yellow) and the cover plate (green) on the proper side of the exhaust box. This depends on the frame.

Install the exhaust box on the blower, using the bolts provided in the hardware kit. Stick the foam strip on the blower to fill the gaps.

Then install the flex hose on the tube and tighten it thanks to the provided clamp. Route the hose towards the ground and zip-tight it on the frame.

Make sure that the exhaust kit does not interfere with the folding wings.
