

Tech Bulletin: FurrowJet Compatibility Update

As previously communicated, the FurrowJet assembly cannot be installed on a row unit with a “low-drop” in-furrow style insecticide tube. Due to this installation interference AMVAC developers have designed a new insecticide tube that can be used with FurrowJet. Below are pictures of the newly designed insecticide tube and the original insecticide tube. If you have any questions or wish to place an order please contact Larry Conrad at AMVAC.

These top two pictures are the newly designed insecticide tube that **should not** interfere with the installation of FurrowJet.

These lower two pictures are the original “low-drop” in-furrow style insecticide tube that **will** interfere with the installation of FurrowJet.
