Gen 3 Software and Connect App Updates

20|20 Gen 3 Software Update

Software version 2019.1.6 is now available for 20|20 Gen 3 displays. It can be downloaded from the link below or from the Precision Planting Cloud. This version includes the following fixes and additions:

- Fixed an issue that caused vDrive to plant the default rate on section 2 when variable rate was enabled
- Fixed an issue that caused the seeding prescription legend to display incorrectly
- Fixed an issue that caused 20|20 displays in air seeder mode to crash when connected to an FVM
- Disabled radar speed when it is uncalibrated
- Fixed an issue where 20|20 would send invalid data to FieldView when certain European planter makes were selected
- Added more small metric and control buttons

20|20 Connect App Update

Version 1.2 of the 20|20 Connect app is now available in the app store. This release includes both new features and fixes.

New Features

- Added the ability to enter a custom hybrid name in the hybrid setup page from 20|20 Connect
- Added support for SmartDepth
- Added support for FurrowForce
- Added Sidedress implement support

Fixes

- Improved the text for scanning seed bags to make it easier to capture the hybrid name
- Fixed an issue that did not correctly display the event details correctly on a phone
- Fixed an issue with GPS measurements
