

JD Bulk Fill Template Kit

Provided Parts:

- 768560 JD Bulk Fill Template (Qty. 1)
- Parts to be reused or sourced from John Deere:**
- A54752 Adapter Fitting (Qty. 1)
 - 19M7866 M8x20 Screw (Qty. 3)
 - E63525 M8 Nut (Qty. 3)
 - TY22468 Clamp (Qty. 1)
 - A55981 Hose (Qty. 1)

The 768560 JD Bulk Fill Template Kit is used when customers want to use the vSet 2 JD Full Size Hopper with bulk seed delivery tanks. Only the template is provided. All other parts must be reused or sourced from John Deere.

Step 1

Check the length of the seed delivery hoses. Make sure that each is long enough to reach the seed hopper inlet. Some rows on the right wing may be too short.

Step 2

Align the template onto the full size Precision Planting hopper as shown in figure 2. The template should be as far to the left of the front of the box as possible. If the seed delivery hose is too short, move the template rightward across the box to a location that the hose will reach.

Figure 2

Step 3

Mark the four holes and then drill the three outer holes using a 3/8" drill bit. Cut the seed inlet hole using a 2.5" hole saw.

Figure 3

Step 4

Secure the original or separately sourced John Deere parts to the hopper. Attach the bulk fill seed delivery hoses to the hopper. Position the end of the hose directly over the meter entrance.
