

BULLSEYE® seed tube

Kinze 2007 and newer Seed Tube Installation Bulletin

On some Kinze planters newer than 2006 the shank is narrower. Mount the sensor as shown below.

Figure 1 is how you would normally mount your Kinze sensor to a seed tube.

Figure 1

Note how the bottom zip-tie is attached.

Shank hit Zip-tie here.

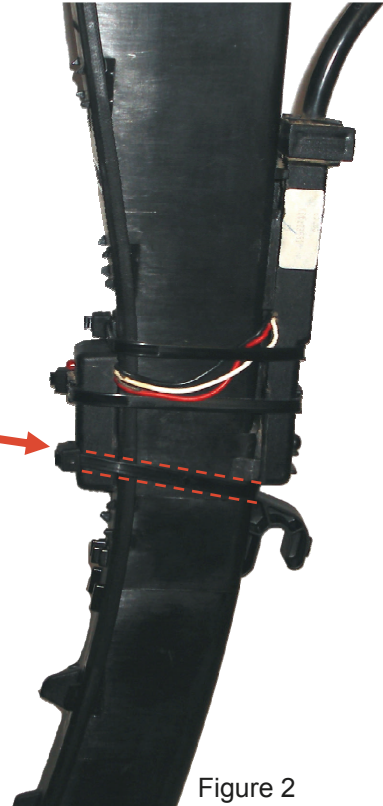

Figure 2

Figure 2 is how we recommend mounting the sensor to the seed tube.

Some newer Kinze planters have a narrower shank which can cause the bottom zip-tie to conflict as you install it onto the row as shown in figure 1. To solve this problem simply strap the bottom zip-tie lower on the side with the hook. This will keep it free from any conflict with the narrower shank as shown in figure 2. There are still two zip-ties securing the sensor to the tube so this alteration does not affect the stability of the sensor.
