Confirm your account

We have sent a code by email to u***@g***. Enter it below to confirm your account.

Verification code

Confirm account

Didn't receive a code? [Send a new code](#)

6. After you have verified your email, you will need to change the name from your email to your name using the edit button, read and agree to the terms and conditions of Panorama, check the box, then hit continue.

Complete Sign Up

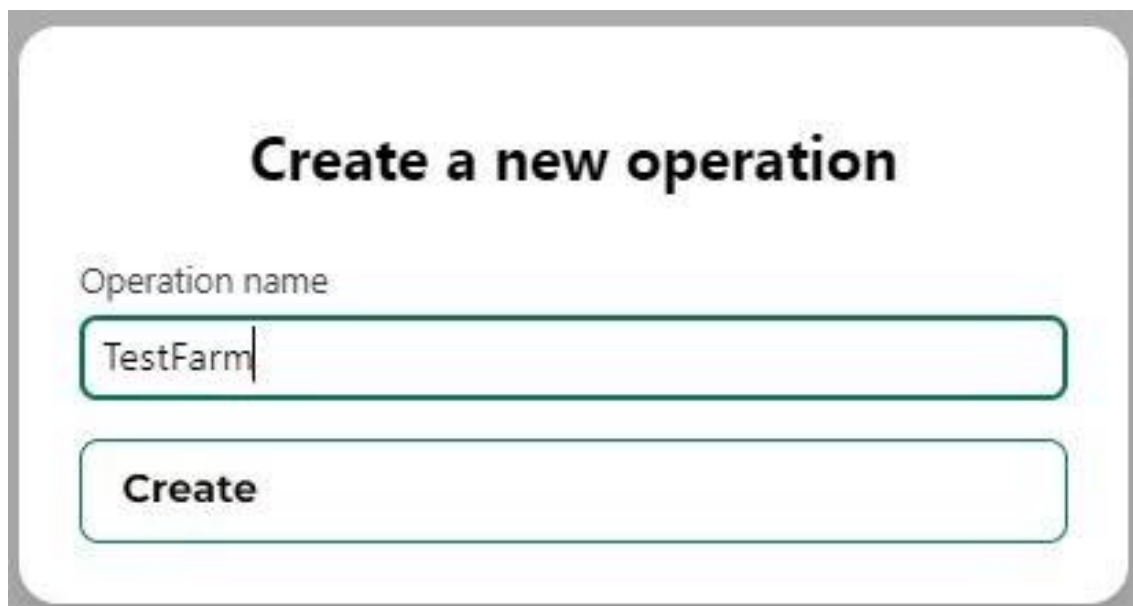

Name

☐ I have read and agree to the [terms and conditions](#).

Continue Cancel and sign out

This screenshot shows a 'Complete Sign Up' form. It has a title 'Complete Sign Up' at the top. Below the title is a text input field labeled 'Name'. Underneath the name field is a checkbox followed by the text 'I have read and agree to the terms and conditions.', where 'terms and conditions' is a blue hyperlink. At the bottom of the form are two buttons: a primary button labeled 'Continue' and a secondary button labeled 'Cancel and sign out'. Red rectangular boxes are drawn around the 'Name' input field, the checkbox area, and the 'Continue' button.

7. Now that you have accepted the terms and conditions, you will create a new operation. This is when you will give the operation its name.

Create a new operation

Operation name

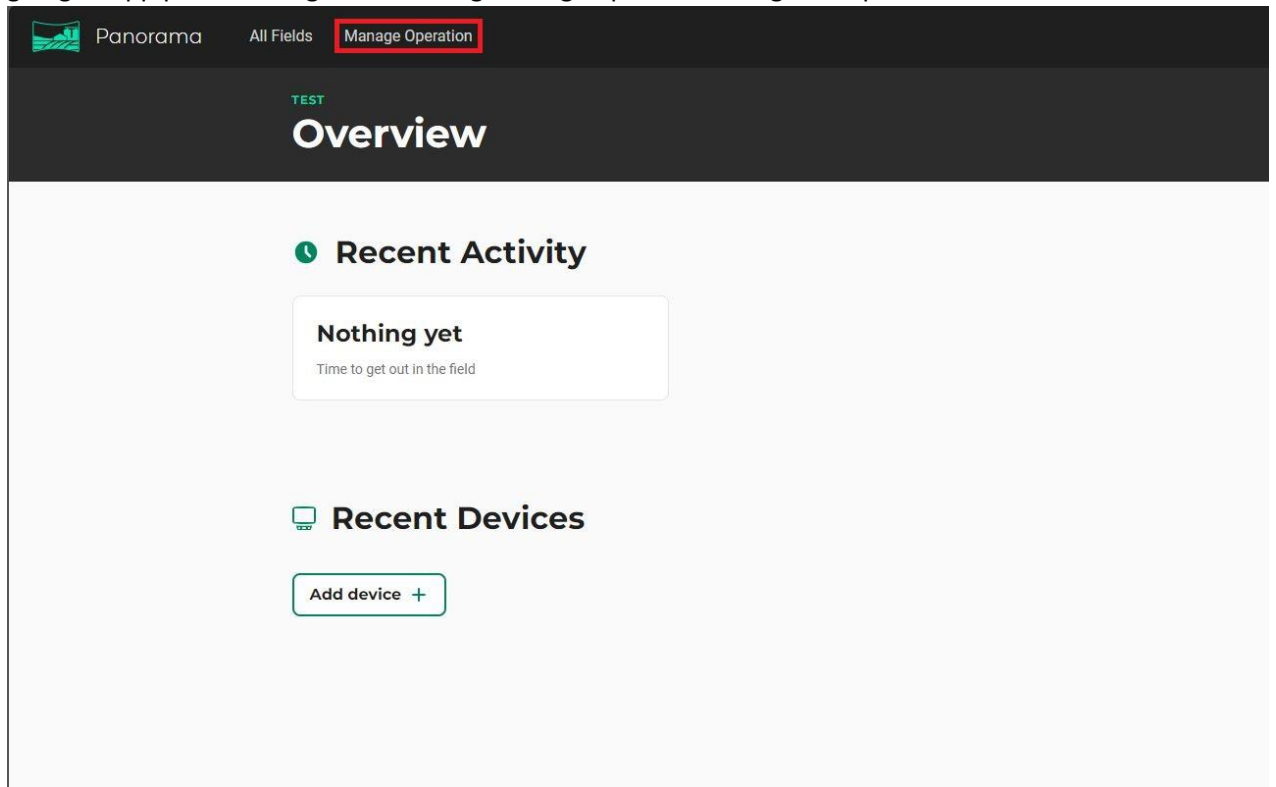

TestFarm

Create

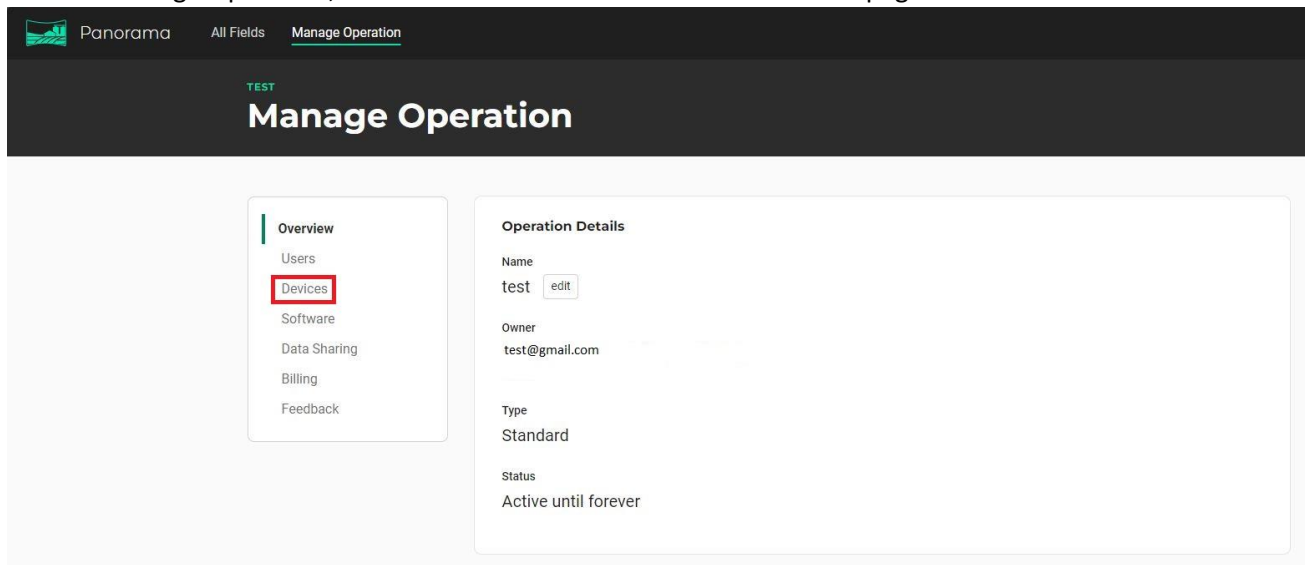

This screenshot shows a 'Create a new operation' form. It has a title 'Create a new operation' at the top. Below the title is a text input field labeled 'Operation name'. The text 'TestFarm' is entered into this field. At the bottom of the form is a button labeled 'Create'.

Pairing a Device

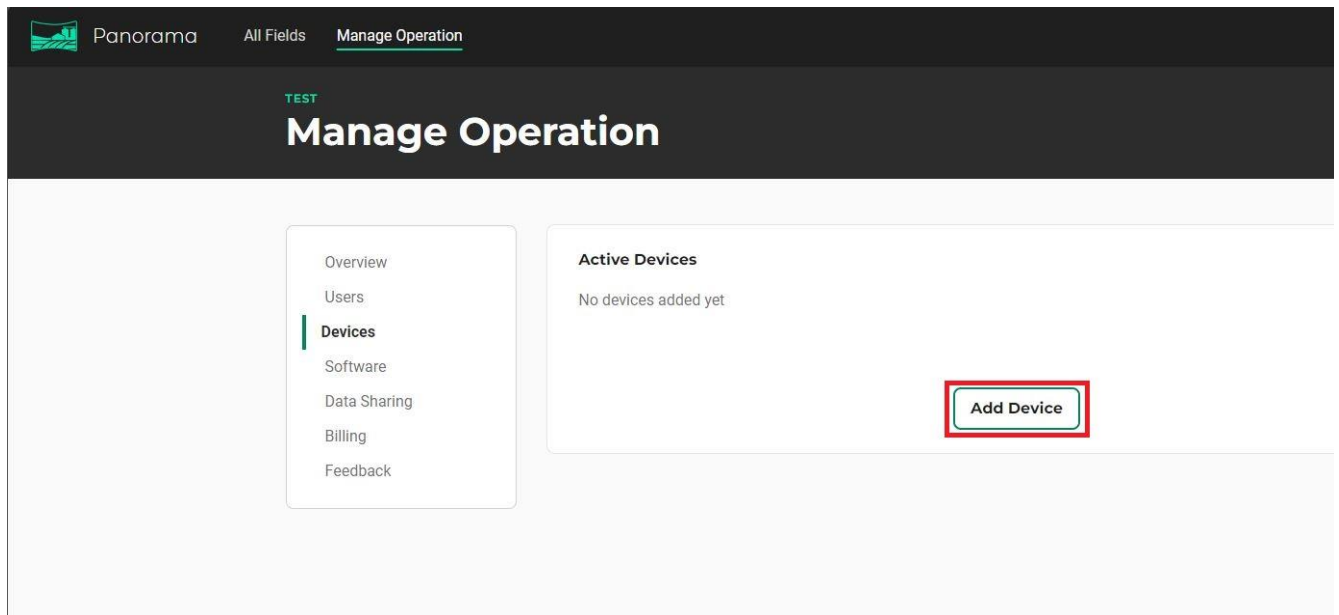

1. After your account is set up, you will pair your 20|20 with your Panorama account. Start by going to app.panorama.ag and selecting Manage operation along the top of the screen.

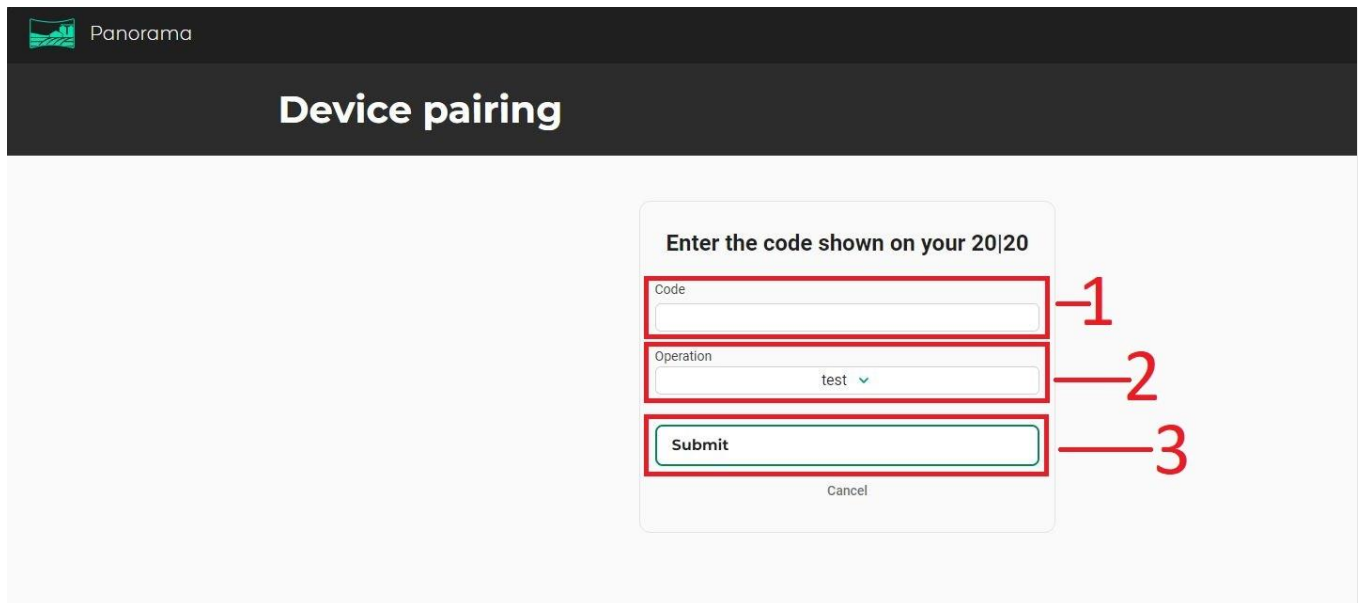

2. Once in Manage Operation, click on devices on the left-hand side of the page.

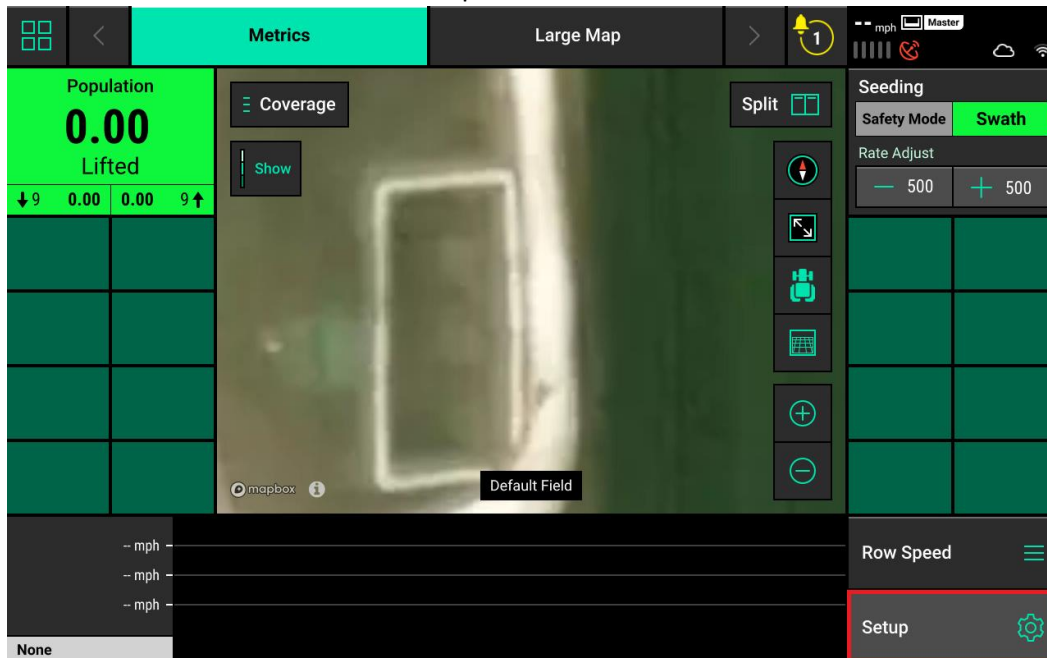

3. In the devices page, click Add Device

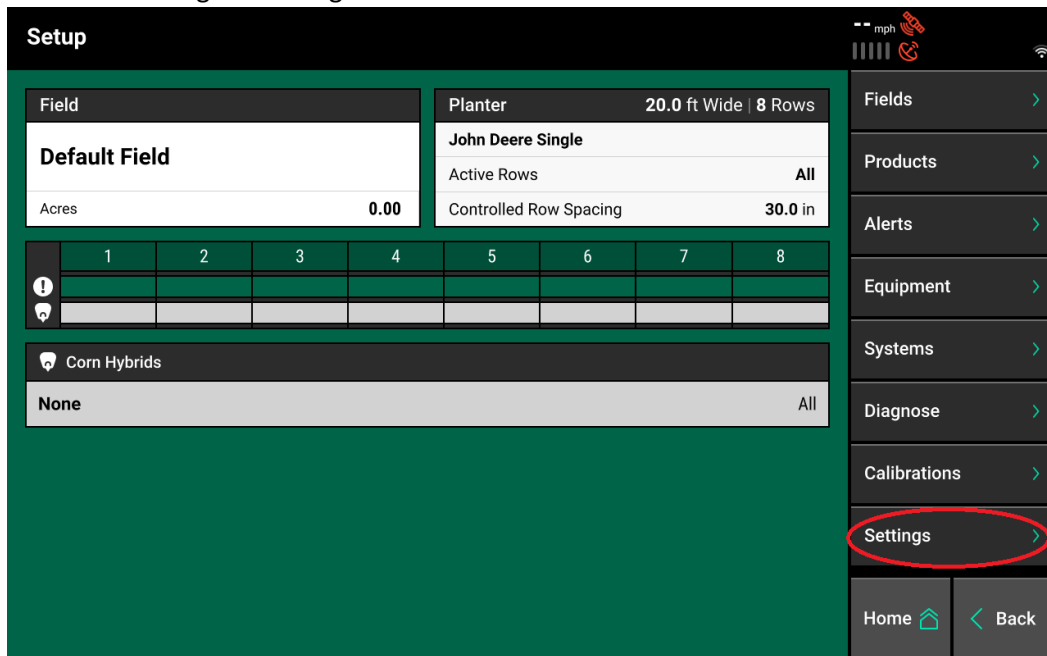

4. After selecting add device, you will get a popup for a pairing code and a drop down to select an operation. Selecting the operation will allow you to choose which operation your 20|20 will send data to. After entering the pairing code shown on your device (Steps 5-11) and selecting the operation, click the submit button. You will then be given an option to create a name for your device (20|20).

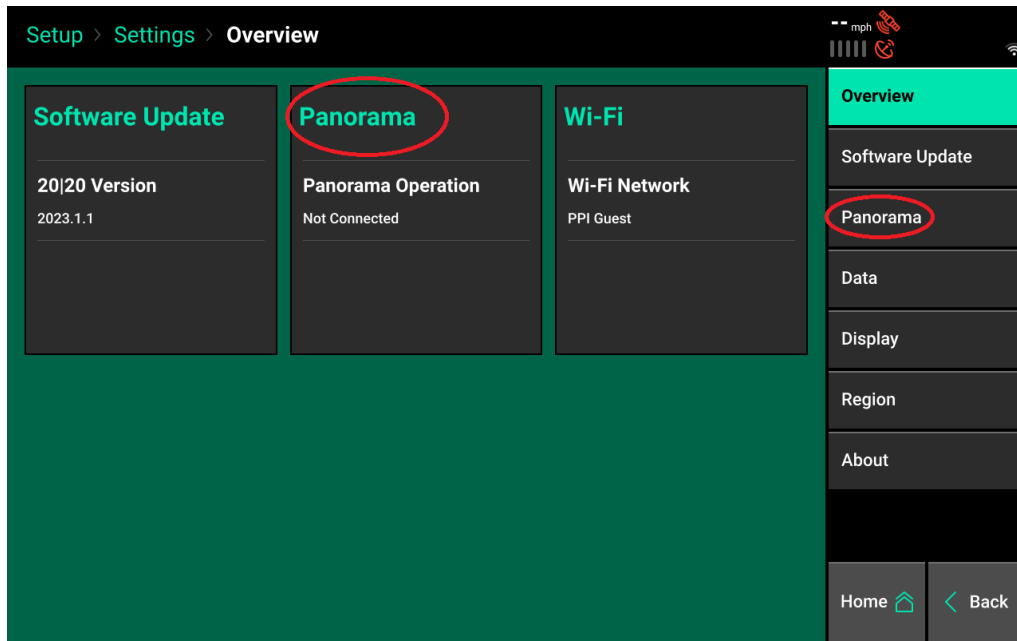

5. Once you get to the point of entering your code on your 20|20 and choosing your operation, you will switch to the 2020 and select setup.

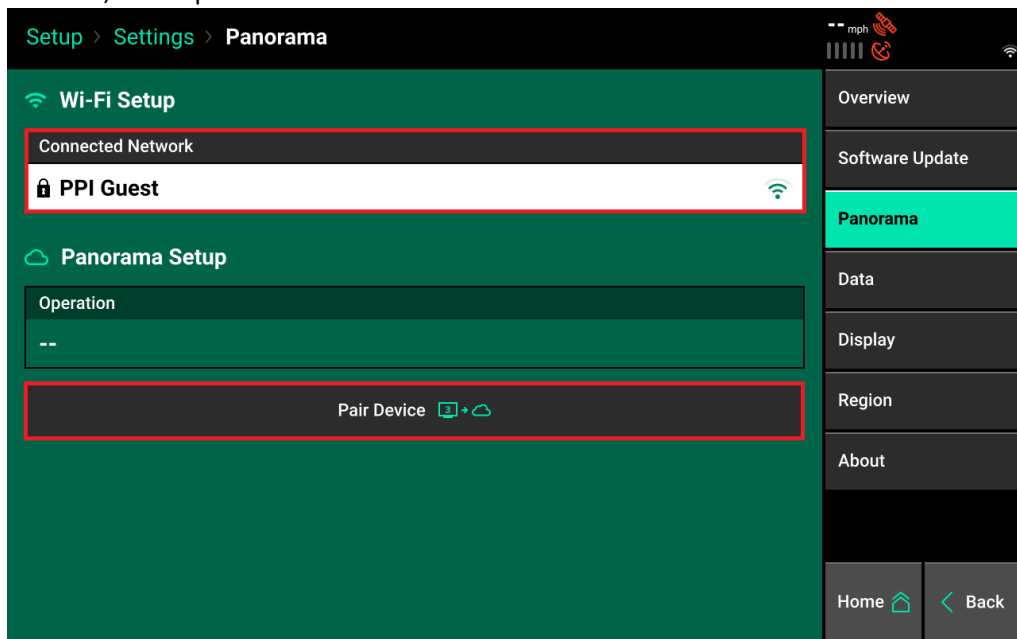

6. Next click settings on the right side of the screen.

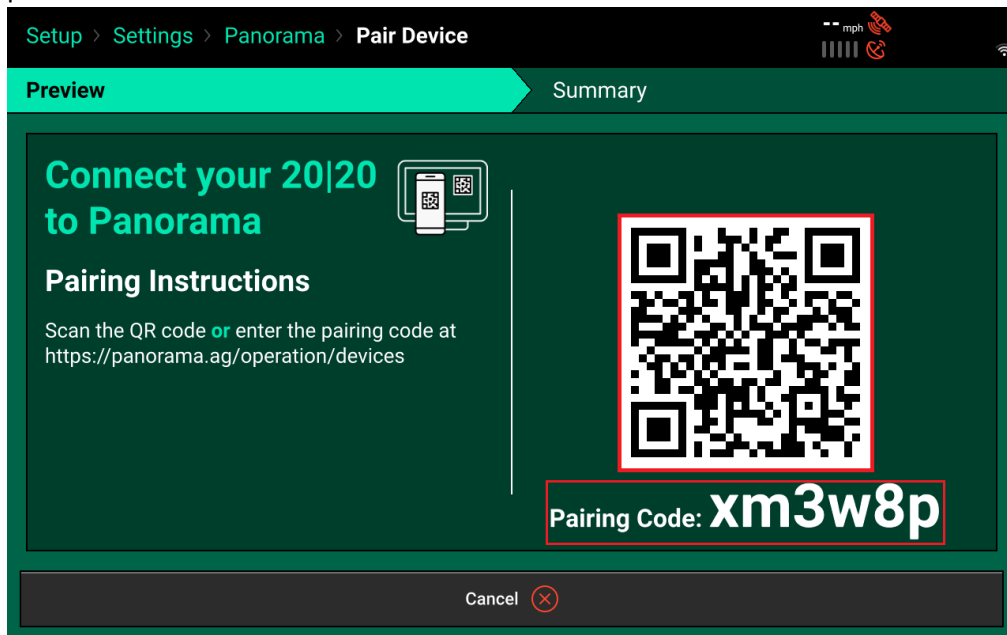

7. In the settings, select Panorama either on the main screen or in one of the options on the right side of the screen.

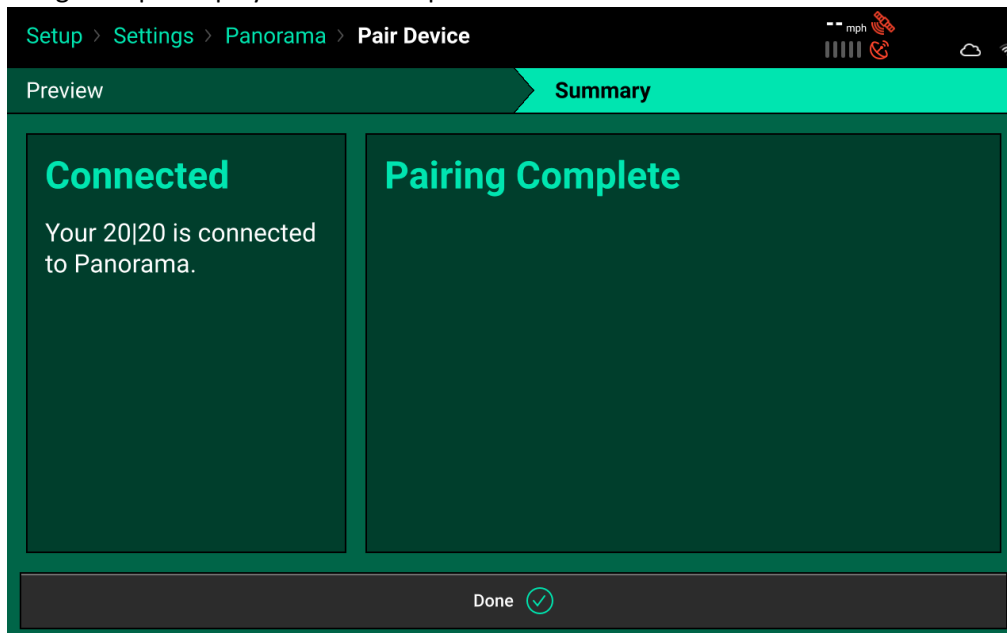

8. On the 20|20, if you are not connected to the internet, select Connected Network, and connect to your internet connection you will be using while running Panorama. Once connected to the internet, select pair device.

9. You will then be shown a QR code as well as a pairing screen. The QR code will take you to your web browser when scanned, and you can log into your account to pair your device as per the instructions above. If already on the website, you can enter the pairing code in the browser and proceed from there.

10. Once the pairing code has been entered on the website, you will see this message on the 2020, and you will be able to give your 20|20 a “Device Nickname” to differentiate your devices, if using multiple displays under one operation.

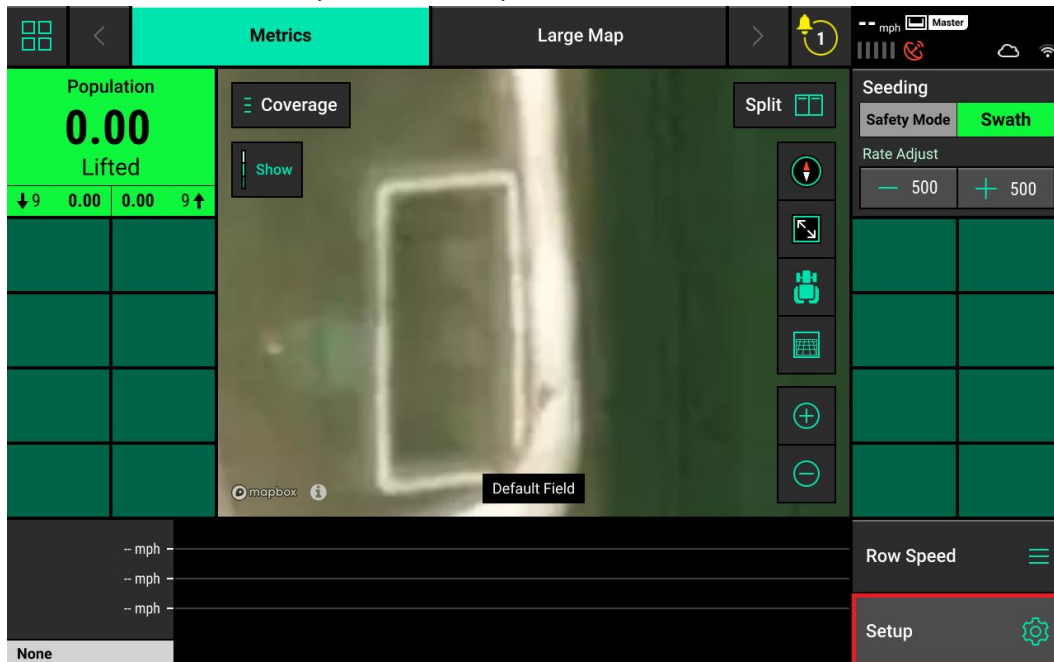

11. Once your pairing is complete you are ready to start sending data to your Panorama account.

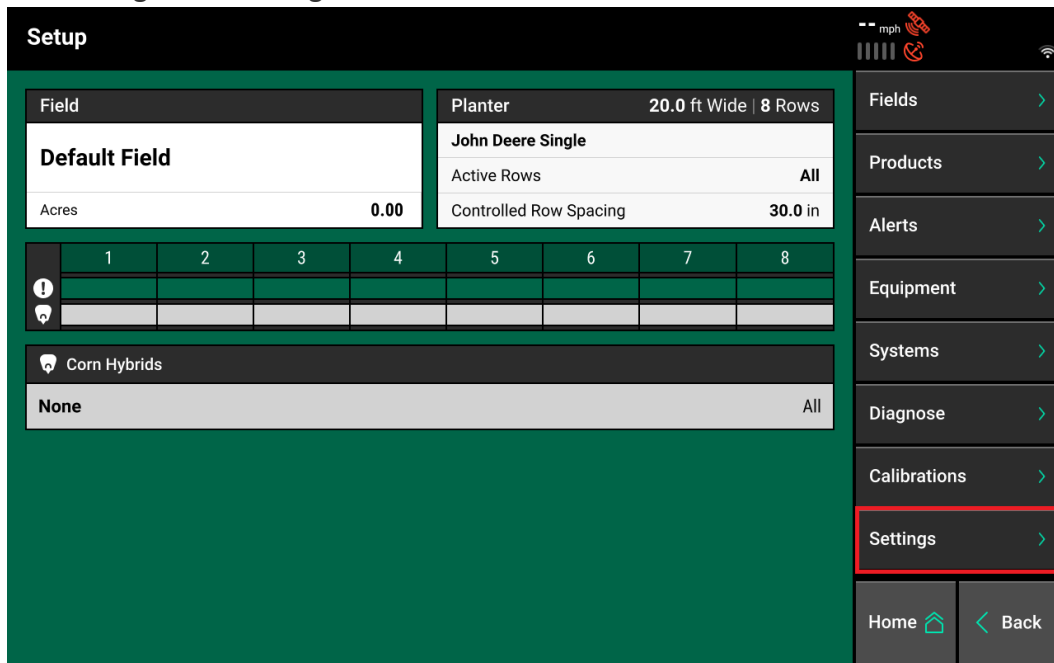

Uploading Data

If data has not streamed to Panorama from the 20|20 or started uploading, these steps outline how to force data from the 20|20 up to Panorama.

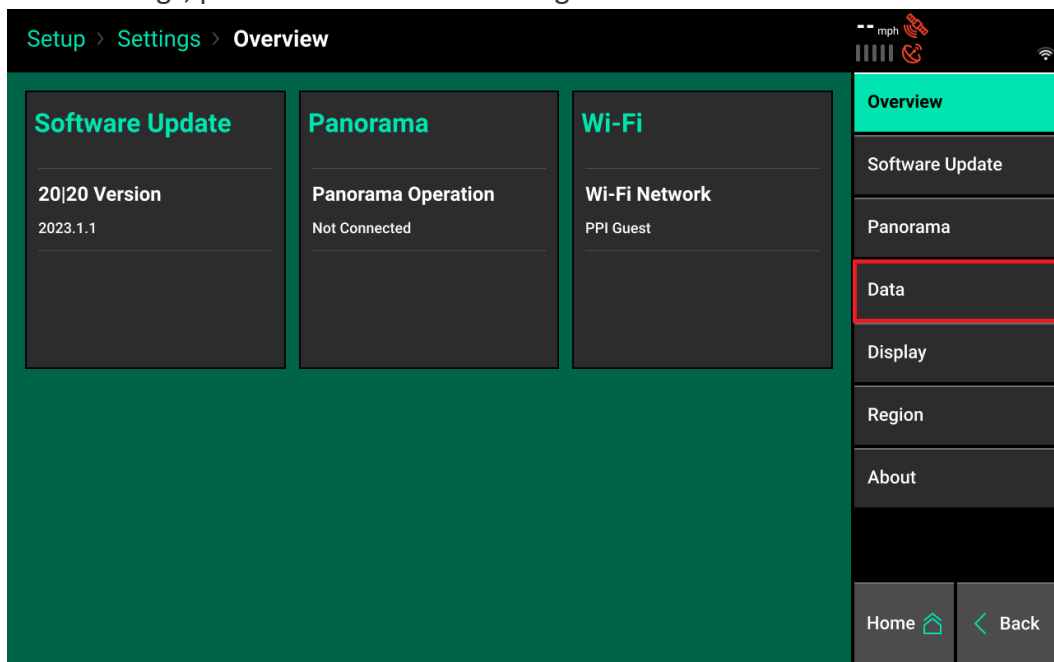

1. From the home screen, press the setup button.

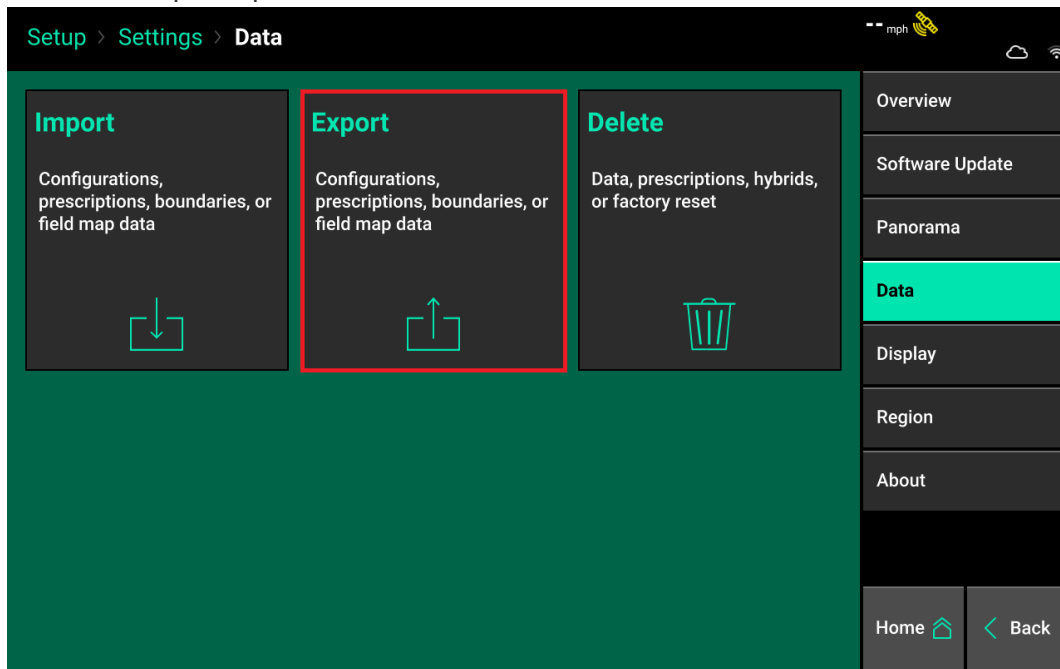

2. Then navigate to Settings.

3. From settings, press the Data tab on the right side of the screen.

4. Select the Export option in the middle of the screen.

5. Once on the export page, you will see a small percentage with a circle around it. This percentage shows how much of that field has been uploaded. Select the field or multiple fields that need to be uploaded and hit the upload button on the right-hand side of the screen. This will force the fields to upload while connected to the internet.
