

Stop Kit for Case IH 12xx Planters

Parts List:

- ◆ 755236 Case IH Stop Bracket (Qty. 2)
- ◆ 37268 1/2-13 GRD C Toplock Nut (Qty. 4)
- ◆ 21823 1/2-13x1 1/4 GRD 5 ZN Carriage Bolt (Qty. 4)

The Row Unit Travel Stop Kit for Case IH 12x0 and 12x5 series planters with DeltaForce and CleanSweep in combination with Yetter 2967-014 and 2967-097 row cleaners (part number 755231) is needed to prevent the row unit from travelling too far up and damaging the fitting on the CleanSweep cylinder. This damage can occur when both the row unit and row cleaner are both travelling to the up position at the same time. One 755231 kit is needed for each row unit. The two brackets in each kit are identical.

Step 1: With the planter raised, install one stop bracket on the left side of the row unit (when viewed from the rear of the planter). Install the bracket on the inside of the row unit with the supplied hardware. The shorter part of the bracket should be in line with the upper parallel arm when properly installed.

Figure 1

Step 2: Install the second stop bracket on the right side of the row unit (when viewed from the rear of the planter). Install the bracket on the outside of the row unit with the supplied hardware. The shorter part of the bracket should be in line with the upper parallel arm when properly installed.

Figure 2

Step 3: Run the row unit and row cleaner through their full range of motion to verify that the CleanSweep cylinder upper fitting will not contact the lower parallel arm when the row unit and row cleaner are both fully compressed (up).
