

Technical Bulletin:

WaveVision with 2015.0.9 SW and Hill-Drop Cotton

February 23rd, 2014

WaveVision®

2015 software for 20/20 displays includes the ability to accurately count population for two or three Hill-Drop Cotton. The new algorithm in the software will report population with +/- 2% of actual.

The current version of software, 2015.0.9, has this capability but requires that the crop be assigned as "Soybeans" to use it accurately. When software version 2015.1.x is released in March, you will be able to select "Cotton" as the active crop and take full advantage of this new feature.

Crop Setup		
Select Crop to MAKE ACTIVE		
Soybeans (Active)		
Corn	Cotton	Sorghum
Soybeans (Active)	Urea	Add Crop
