

eFlow Instructions

This special blend of talc and graphite improves seed loading and seed release – and that improves seed spacing. eFlow improves the flow of seed from the hopper to the meter. In the meter, eFlow ensures that seeds release consistently once the vac is shut off and seeds drop to the seed tube. The blend of talc and graphite, especially in smaller seeds, helps seeds slide off the disk like clockwork.

eFlow Lid

Optional Part # 930006

We've also developed a clean and convenient measuring lid that fits the eFlow jug. The lid meters 1/8 cup of eFlow with each turn of a handle – two turns equals 1/4 cup delivered directly into the hopper.

eFlow is available in a convenient 8# jug. That's enough to lubricate 160 units of seed corn.

Recommended Amount

Don't exceed the recommended amounts. Too much talc can inhibit seed flow – especially in high humidity. Watch for talc or eFlow accumulations at the bottom of the seed hopper or meter.

- Just mix 1/4 cup of eFlow per 80,000 seeds.
- On large seeds, 60# or more per 80,000 seeds, reduce the rate to 1/8 cup.
- Approximately 40 cups per jug of material.
- 40 x 4 (quarter cups) = 160 units of seed treated with each jug of material
- 160 units x 2.67 acres per unit of seed = 427 acres planted per 8# container

Treated seeds with a rough coating may need more eFlow.

Limited Warranty: Since Precision Planting does not control the application of this product, nor the condition of the surfaces to which they are applied, a Limited Warranty is provided. If the product does not perform as specified, for whatever reason, we will replace it. Precision Planting's liability will under no circumstances exceed replacement of the product.

Precision
PLANTING

Precision Planting Graphite Powder

This premium graphite extends wear life and improves meter performance. Graphite provides the lubrication needed to prevent wear on meter components. It also improves seed flow and can improve meter performance. But, as with most things, a little is good, but a little more can be bad.

1 lb Bottle

Part # 930011

Part # 930015

5 lb Jug

Recommended Amount

Don't exceed the recommended amounts. Too much graphite can inhibit seed flow – especially in high humidity.

- A teaspoon per bag (80,000 seeds per unit) is recommended.
- Mix the graphite into the seed to prevent uneven settling.
- When using heavy seed treatments, increase amount to 2 teaspoons.

plasti-kote® Aerosol Graphite

12oz Aerosol

Part # 930016

Plasti-Kote Aerosol Graphite is a graphite lubricating paint that adheres to most surfaces with minimum pretreatment and dries in minutes. For use with Precision Planting Backing plates and eSet Disks as a lubricant.

Limited Warranty: Since Precision Planting does not control the application of this product, nor the condition of the surfaces to which they are applied, a Limited Warranty is provided. If the product does not perform as specified, for whatever reason, we will replace it. Precision Planting's liability will under no circumstances exceed replacement of the product.
