

vSet[®] vSet Select Fittings Kit (1.5" Hose)

731184

Parts List

- **731104 Vac Hose Meter Fitting** (Qty. 1)
- **731182 Vacuum Hose Fitting** (Qty. 1)
- **731177 Row Unit Hose Cap** (Qty. 1)

The 731184 vSet Select Fittings Kit with 1.5" hose is used for existing OEM JD or previous Precision Planting installed vacuum systems. You will upgrade to Precision Planting 1.5" row unit hose.

Step 1

Remove OEM or existing PP row unit hose and fittings. Thread the 731104 fitting onto the new 1.5" row unit hose noting the left hand threads. Turn the fitting counter-clockwise to tighten.

Step 2

Route the row unit hose back to the vSet Select vacuum branch. Ensure there is enough slack in the hose to allow for the full range of row unit movement.

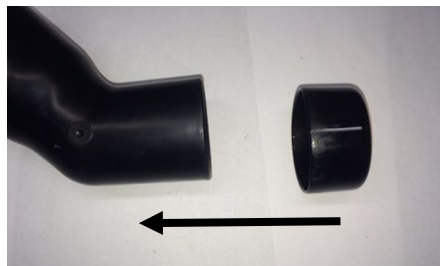

Step 3

Thread the 731182 fitting onto the meter end of the row unit hose, noting the left handed threads. Turn counter-clockwise to tighten.

Step 4

Use the 731177 Row Unit Hose Cap to manually disable planter rows.
